Dear Liz, thanks you very much for your support. I watched the videos you sent but still the issue was not resolved. As i said in the first message, i am interest in antenatal care (timely & completion ANC). Using the IR Dataset for women provided, my outcome variables of interest and some explanatory variables are missing as shown below.

My outcome of interest (coded "m13_1 to 6: timing of 1st antenatal check (month) and m14_1 to 6": number of antenatal visits during pregnancy) are missing in the IR dataset yet they exist in the Women questionnaire and codebook. Also other variables of interest like distance to health facility, health insurance status - v481, marital status, pregnancy wanted - m10, complication's pregnancy m43 and m44
, frequency for radio, TV and news paper - 157 to 159, services received during pregancy: Weight m42a, Height m42b, BP m42c, Urine sample m42d, Blood sample m42e, Deworming m60, getting medical help for self v467 a to i and final say on on own health care are also missing. I kindly ask you to provide another Dataset which have those variables.

Best regards.

Fiston
