Following is a response from Senior DHS Stata Specialist, Tom Pullum:

Please try the following. I have not tested it, but I would expect it to work. The main change is to divide hc70 by 100 rather than 200. Also there is no need to check hc13.

```
replace hc70=. if hc70>=9990
gen z=hc70/100
gen stunted=0 if z<.
replace stunted=1 if z<-.2
gen wght=hv005/1000000
by hv025: tab stunt [iweight=wght]
```
