Subject: How to deal with missing DHS Clusters?

---

Dear DHS users,

I am using Côte d'Ivoire DHS 2011-2012 data and there is no cluster 225. However, it is reported that there were 352 DHS clusters. Is there a mistake in the geographic dataset? Some DHS clusters are missing but are not empty. How to deal with those clusters? If I used the centroids for those last ones, can I displace them up to 1 km for example to avoid duplicate points?

Thank you.

Emmanuel Barankanira
