Subject: Re: Pregnancy History Posted by gafap on Thu, 27 Apr 2017 12:35:09 GMT View Forum Message <> Reply to Message

Dear all,

I have a related question. I'm following the code before for reshaping the data into a pregnancy level dataset. I start from the IR (women) dataset, for Armenia 2010 DHS. After correcting for variable names, the code I run is below.

I want to replicate table 8.1 from the DHS 2010 report. But I cannot even get the number of pregnancies right. In report, the total number of pregnancies in the 3 years prior to survey are 1,457. After my code, I get 1,368. Hence I am missing some pregnancies somehow. Can you help?

Thanks!

use "AMIR61FL.DTA", replace

gen weights=v005/1000000

\* Rename variables to permit reshaping ren bidx\_0\* bidx\_\* ren bord\_0\* bord\_\* ren s2\*\_0\* s2\*\_\* ren b0 0\* b0 \*

\* keep the variables ytou need - you may need more than this list keep caseid weights v013 v008 v102 s209a s215a\_\* s222c\_\* s214y\_\* s214m\_\* s214c\_\* bidx\_\*

reshape long s215a\_s22c\_s214y\_s214m\_s214c\_ bidx\_, i(caseid) j(order)

ren s2\*\_ s2\* ren bidx\_ bidx

\* drop empty pregnancies drop if bidx == . cap drop bidx\_1 -bidx\_24

\* Keep those who were aborted (born) within the last 3 years from interview cap drop timesincepreg

gen timesincepreg = v008 - s214c

tab s215a if timesincepreg<=36

s215a	Freq.	Percent	t Cum.
live birth   still birth	913 3	66.74 0.22	66.74 66.96
miscarriage	81 271	5.92 27.12	72.88 100.00
abortion	371 	27.12	100.00
Total	1,368	100.00
