Subject: is re-weighting possible if strata have changed?

I'm working with a survey in which one EU was placed in the wrong stratum (new District boundaries were drawn after sample was selected). The sampling weights were stratum specific. Is there a way to re-allocate the EU from stratum 1 to stratum 2 and recalculate the sampling weights so that the new District boundaries are used? I've searched the threads on this and it may be that the answer to this question is out there, but I'm searching for the wrong terms. Many thanks for any advice!
