Subject: General fertility rate on STATA
Posted by catherino222 on Tue, 09 May 2017 01:03:37 GMT

Hello,

I am using Cameroon DHS 2011 and would like help on how to compute the general fertility rate on STATA. I used the tfr2 command which gave me the TFR but I am not sure how to proceed to get the GFR. I would also, like to know how to change the default 3 year period that precedes the survey to a longer period of 5years or 7 years and derive GFR for different regions within the country.

Thank you very much
