Hello,

I aim to use the 2011DHS for Uganda and use the survey design function in STATA (svy). For that, I need the information about the primary sampling unit (v021) as well as sample strata (usually in DHS v022). For this survey however, the v022 variable is empty.

Could you advise why that is the case and what I should do to obtain information about the sample strata for sampling errors?

Many thanks,

Ewa
