Sorry for a perhaps naive question. But after appending surveys of different countries and running `allclusterid=group(survey cluster)` and `allstratum=group(survey stratum)`, in the following `-svyset-` I think I should use `psu(allclusterid)` and `strata(allstratumid)`, instead of `psu(v021)` and `strata(v022)`. Is this right?

Thank you!
