Hello,

I m working on bivariate analysis between female genital cutting and socio-demographic variables using the 2013 Nigeria DHS data in Stata. Everything works fine with previous surveys (2008 and 2003) but 2013 DHS. I tried a cross tab between FGM (g102) and age group(v013) with no test statistics returned. Instead, I got this response

"Missing test statistics because of stratum with single sampling unit".

I have attached the stata output as well.

Kindly assist.

Thank you.
