I suspect that the problem is that the dataset you are trying to upload has more than 1000 variables, and I'm guessing that perhaps SAS Studio has a limit of 1000 variables. Perhaps try testing this with a dataset with less than 1000 variables. Try going to <http://dhsprogram.com/data/Download-Model-Datasets.cfm> and download zzpr62sd.zip, unzip this file and try to import it into SAS Studio. This file has less than 1000 variables, so it will give a clue if this is the issue.
