Subject: Use of svyset when standard errors are already clustered
Posted by ale_sovera on Wed, 28 Jun 2017 13:08:53 GMT

Good afternoon,

if in my regression analysis I need to cluster the standard errors by month-year of birth, should I use also svyset in Stata in order to take into account survey strata?

I have read some posts about that and I am still not completely sure about how to use svyset when running analysis with DHS data.
