Dear Cameron Taylor and Liz ,

Thank you very much for your help.

I'm using now the women recode (IR) file and I saw your answer but why did you put 97 in your syntax when you created "sptwoanc" (you can see the table of ml1_1).

For our code DRC ,I tried theses syntax and I got now 7168 for the proportion of women who received two or more doses of IPTp during their last pregnancy in the last two years but I have a problème to reproduce the descriptive table ,how can I reproduce the result as in the report for example "the descriptive of age" because I don't able to have the correct table of description as in the report (for example "Tab V013")

Thank you a lot

Fiston Kambi
