I am using the 2014 KDHS and would like to replicate table 16.1.1 of the DHS report on Experience of physical violence: women.

For example if I replicate physical violence by residence, I do not get the same figures as the those in the table.

Also the total Number of women column in the table tallys (2250-Urban and 3406-Rural) only when I include those who were never married. However, the variables d105a,b,c,d,e,f, and j for these group of women are all missing. Is there something I am missing?

This are the codes I am using:

```
gen wght = d005/1000000
```

```
gen physicalviolence = .
```

```
foreach dvar of var d105a d105b d105c d105d d105e d105f d105j {  
    replace physicalviolence = 1 if `dvar' != 0 & `dvar' != .  
}
```

```
foreach dvar of var d105a d105b d105c d105d d105e d105f d105j {  
    replace physicalviolence = 0 if physicalviolence==.  
}
```

```
bys v025:tab physicalviolence [iweight=wght]
```

Any assistance is highly appreciated.
