Hello, I am using Kyrgyzstan survey from 2012. I need to create a variable reflecting employment (v731). I created a dummy using v731: no=0 and other==1. However, I need to exclude women who were employed "once in a while" (category in v732). How can I combine v732 and v731 to exclude women who were employed "once in a while"? I am using STATA. I need to create a dummy variable for women who were employed "throughout the year" and "seasonally/part of the year".

Thank you.
