Subject: DHS Questionnaire questions --> Indicators on STATCompiler

For my work project I have compiled together a set of specific questions from the Woman's and Man's questionnaires as well as the domestic violence module. I am now using STATCompiler to gather the data from 6 specific countries for these questions but am having a little trouble finding the exact indicators from the list provided that translate to the questions as stated in the questionnaire. Is there a reference guide that exists somewhere to translate the questions from the questionnaire directly into the indicators found on STATCompiler?

Thanks in advance!
