I apologize, I tried to piggy back on this questions which was problematic.

I was actually wondering about a similar situation using the AFIR dataset from 2015, and using the S414AA$1-S414AA$6 variable. It is alright for me to only use the S414AA$6 for calculations correct; the subsequent instances aren't listed as NA.

Thank you again, and I apologize for the initial confusion.
