Hi Fiston,
I reviewed your code. Since you are survey setting (using svyset) the data you can't not also include iweight. This video will overview the difference between svy set and iweight
https://www.youtube.com/watch?v=YpXPWMUsb94

This is what you have:
svy: tab v013 sptwoanc , row obs count cellwidth(12) format(%12.2g) if agemonth < 24 [iweight= weight]

Try running it without iweight:
svy: tab v013 sptwoanc , row obs count cellwidth(12) format(%12.2g) if agemonth < 24

Thanks
Cameron
