Hello,

I am trying to reproduce a number from the final report/stat compiler:

The percent of women 20-24 who gave birth before the age of 18. The report says 35.7%

I keep getting a higher number, and wonder if I am not taking into account unmarried women.

\* Set up svy paramaters

gen wt=v005/1000000

svyset v021 [pw=wt], strata(v023)

gen agefb= (v211-v011)/12

gen fbu18 = 1 if agefb<18

replace fbu18=0 if agefb>=18

\* All women factor

gen aw = awfactf/100

\* Check the denominator

tab fbu18 [iw=aw\*wt]

Alternatively, I tried bringing nonmarried women in from the household roster, but still found a percentage over 40%. Can you help point me in the right direction?

Cheers,

Kristin
