Dear User,

I have passed your query to one of our experts. I did notice that Q3.05 does ask if the child was weighed when the child was born. There is a line for text indicating that the weight should have been entered there. In current surveys that type of response would be called an OTHER response. Since this is an older survey, I am not sure where that information was kept, so I am trying to find out for you. I also did not see any survey specific variables. It's possible this information is not available, but I will try to find out if it exists. Thanks!
