Dear DHS experts,

I am interested in the migration part of the Pakistan DHS survey. I found that the district codes used in the variables indicating the migrants' origin and destination are not fully covered by the codes you provided here. The district codes used in the migration part are above 601 which is the maximum code in the tables you provided. For example, sh23n is labeled "Place moved from to this village/city: Code ". And it can take values in 701-705, 707, 801, 802, 806, 807, 809. Can you provide the districts names for codes higher than 601?

Thanks a lot!
