Dear User,

A response from malaria expert, Cameron Taylor:

Quote:

Thank you for your question. To find the microscopy results you need to be looking in the PR datafile (GHPR7AFL.DTA). The results are not in the KR or kids recode file since we test all children under age 5 for parasitemia. The KR file is only for kids of interviewed mothers age 15-49.

If you still have questions about the data files please watch the following videos

Introduction to DHS Data Structure: <https://www.youtube.com/watch?v=BmiSDPebmgc>

Introduction to DHS Datasets: <https://www.youtube.com/watch?v=fzLNQkkvDeI>

Thank you!
