Thank you very much. This equation helped me solve my problem.

However, I am now struggling with another equation; exclusive breastfeeding and breastfeeding along with drinking or having other things like water, etc. My result differ by few percentages when I followed the below codes. Therefore, I think I must be going wrong somewhere.

```
COMPUTE age=V008 - B3.  
EXECUTE.
```

```
* Select children living with the mother.  
FILTER OFF.  
USE ALL.  
SELECT IF (B9=0).  
EXECUTE.
```

```
AGGREGATE  
  /OUTFILE=* MODE=ADDVARIABLES  
  /BREAK=V001 V002 V003  
  /BIDX_min=MIN(BIDX).
```

```
SELECT IF (BIDX_min = BIDX) .  
EXECUTE.
```

```
* Select children age below 24.  
FILTER OFF.  
USE ALL.  
SELECT IF ( age < 24).  
EXECUTE.
```

```
* Create age gropus.  
RECODE age (0 thru 1=1) (2 thru 3=2) (4 thru 5=3) (6 thru 8=4) (9 thru 11=5) (12 thru 17=6) (18  
  thru 23=7) INTO age_grp.  
VARIABLE LABELS age_grp 'age group'.  
EXECUTE.
```

```
VALUE LABELS age_grp 1 " 0-1 month" 2 "2-3 months" 3 "4-5 months" 4 "6-8 months" 5 "9-11  
months" 6 "12-17 months" 7 "18-23 months".
```

```

Look forward for your help.
