Many Thanks, Bruno for the link, Its been more helpful, However, I tried running the program with the GDHS 2008, the output showed some error messages. I tried with the children file(Kr) and also the IR women file. I tried locating the section of the legacy file from the dhs file but was unable. I will be most grateful if I could some directions as how to run these programs.  
Thanks so much  
Michael
