Subject: Interviews Requiring Multiple Visits

Hi!

I have a quick question regarding v803 in the individual recode data. When v803 says that the interview required 2+ visits to complete, does the rest of the information for that observation (v006, v007, v016, v801, v802, etc.) refer to the first visit or to the last one? If it refers to the last visit, is there any way, either in the flat or hierarchical file, to uncover on which day the first attempted interview took place?

Thanks so much!
