Dear Liz,

thanks very much for this very detailed answer, and my deepest apologies for the delay in mine.

What is still puzzling me is the origin of the information used to construct the variable hv107. Indeed, the household questionnaire only asks about the "highest grade completed", which I believe is coded as hv106.

There is no question about the number of years spent within each grade. That is, there is no question that would allow to know anything about hv107.

Would you happen to know how hv107 (and hence hv108 and hv109) are computed ?

Best,
