Following is a response from DHS Senior Research Associate, Shireen Assaf:

The Stata code below will match table 11.3 on page 172 of the Nepal 2011 DHS Final report. The feeding variable will give the breakdown of the first 6 columns in the table (not breastfeeding, ebf, etc.) and the breast variable will give the currently breastfeeding percentages. These are cross-tabulated with the variable age2 which was recoded to match the age groups in the table. I use bysort to select the youngest child living with the mother then drop those that are 2 years and above.
