Subject: Malawi 2014 MIS HML32 data values 4 & 5
Posted by AF0918 on Tue, 31 Oct 2017 15:49:31 GMT

Hello,

For 'HML32: Final result of malaria from blood smear test' in the Malawi 2014 MIS dataset, data according to the DHS-VI recode manual are coded with values 0,1,6,7, & 9. However, upon examining the data I am also seeing values coded as 5 & 4 (Ex: Case ID: 40008). Can someone please offer guidance on the meaning of these values?

Cheers,
April
