Thanks for the response! I would have thought that the proper comparison would have been V008A - B18\_01 < 730, since we want less than 2 years.

Also, which variables should I be looking at for 1) mother's postnatal check 2) newborn's postnatal check? I could only find variable M71 for postnatal check timing for EDHS. Further, I was unable to produce the same percentage values as found in the EDHS final report using M71\_01. Only 6.4% of values have responses for M71, which confuses me. Any assistance would be gladly appreciated!
