I am using couple data for analysis. I used two variables: "Have you ever fathered a son or a daughter who was born alive but later died?" and "Have you ever given birth to a boy or girl who was born alive but later died?" I couldn't find the age at death of child in couple data. Can I say that these deaths considered as 0-5 years, as similar to number of children born in the five years preceding the survey who died at any age.
