I am working with DHS data set , and i am going to use SAS 9.2 for my data set analysis. For this moment it's little bit complicate to begin . I have just done proc import of my dataset , and my question is how to select the variable that I need in my analysis and I find also proc content and I logged in sas but on this proc content , there are many data set , and i need only work with adult. So how to begin in sas from data set and proc content
