I don't have much to add other than to agree with Tom above. Not that I'd suggest you listen to me over Tom anyway, but I do agree - it sounds like you have a pretty good handle on what your regressions can and cannot tell you and what you are trying to get done. Everything else sounds totally reasonable - and yes, it does make some sense to compare within-country wealth differences, even averaging those within-country estimates up. I just wanted to make sure you were interpreting that right, and it sounds like you've thought about it very clearly.
