Subject: Statistical difference in median ages Posted by kbietsch on Thu, 21 Dec 2017 21:36:34 GMT View Forum Message <> Reply to Message

Does anyone have a suggestion for a significance test to compare two median ages. For example, I want to see if the median age at first marriage has changed between two surveys.

A more complicated question: is there a way to test for a statistical difference in SMAM (Singulate mean age at marriage)? Thanks! Kristin
