Subject: SPA data set question
Posted by Seba on Wed, 03 Jan 2018 07:00:37 GMT

Hello,

What is the difference between the two data sources (Facility Record and Facility Raw) within the SPA data set. I am asking this because, a variable that I need (Service Provider Sex) is found in the Facility Raw data set but not in the Facility Record data set. Can I use the Facility Raw data set?

Thank you,
Sebawit

=======
I realized that I was looking for Service provider information (Service Provider Sex) in the wrong folder. I was able to find in the variable in the Provider Record folder of the SPA data set (I am looking at the SPA data set for Malawi, Tanzania and Senegal).

I have another question. Will you be able to help me identify a way of linking SPA Service Provider data set to DHS Individual Record data set for Malawi, Tanzania and Senegal?

Thank you for your help.
