Hi,

I am trying to estimate the prevalence of hypertension among men and women using Nepal 2016 DHS data in Stata. The prevalence that I estimated is almost closer to the prevalence reported in Table 14.3.1 & 14.3.2.

However, the sample size doesn't match with the report.

I have attached the do file. I will be grateful if Experts form DHS could help me to match the exact sample size.

Thank you.

Regards,
Santosh
