Subject: Can't find Wealth Index in STATcompiler
Posted by olarosling on Sat, 22 Feb 2014 18:25:36 GMT

I followed the instructions on this page: https://www.measuredhs.com/topics/Wealth-Index.cfm, for how to get Wealth Index data in the STATcompiler. But the last step is wrong: I can't find Household wealth index, under the branch "Respondent Background Characteristics". Can you please have a look at these instructions:

"To explore health and population indicators by wealth, select from the Complete List in STATcompiler, then chose Characteristics of Households, find Respondent Background Characteristics, look for the Household wealth index, and click on the desired wealth quintiles."

(PS. The Spatial Data Repository has the Wealth Index branch, by women and men: http://spatialdata.measuredhs.com/data.html)

:) Ola
