The questions for variables v743a, v743b, v743d are asked in the set of questions for the state modules (see skip in the filter 728 in the questionnaire), so these variables are only available for women that answered these modules. The selection for this can be performed using the variable SSMOD = 1.

To look at women's empowerment and maternal health for these data you need to select for:
SSMOD = 1 AND V501 = 1 AND V208 > 0
selecting for those answering the module, who are currently married and who have children born in the last 5 years.
