Following is a response from Senior DHS Stata Specialist, Tom Pullum:

It appears that the questions about antibiotics were asked with options for specific types and these are coded in separate variables, not with h37i or h37j. In the Bangladesh survey, for example, they are given in the KR file with 7 variables s538g through s538m. I found them by entering the command "lookfor antib", which searches through variable labels. You could do the same for the India and Myanmar KR files.
