Dear DHS members and users,

I am trying to merge the WHO z score data with the child record data of DHS Egypt.

For Egypt DHS 1995: I am trying to merge the data of eghw33fl and EGKR33FL. As indicated in
the word file named "merge", I should merge two two files by "V001, V002, B16 (child's line
number in the household) in the Children Recode file". However, in the children's record file
(EGKR33FL), there is no variable of B16, neither other variables labeling for child's line number in
the household.

The same problem happens to EDHS 1992, but there is no problem for EDHS 2000,2003 and
2005.

Anybody has some ideas regarding child's line number in the household in KR files?

Thank you very much,
Yanping
