Subject: How to create media exposure? Posted by anikhpg42@gmail.com on Sat, 03 Mar 2018 07:35:48 GMT View Forum Message <> Reply to Message

Hi,

I am trying to generate a variable combining 3-4 variables.

Example: At first from v157 v158 v159,I created 1)frequency of reading newspaper (yes no, 1 0) = frn 2)frequency of watching tv (yes no, 1 0) = fwt 3)frequency of listening radio (yes no, 1 0) = flr.

Now combining these 3 variables, I want to make a new variable, named "media exposure" with just (yes no, 1 0).

What should be the command in stata?

I used like this in BDHS14 KR dataset,

gen media= int ((frn+fwt+flr)/3) ta media

But, I don't think this is right. How can I solve my problem?
