Hi,

Thank you very much for making my concept clear.

I just want to know from you that,

In my thesis, I am working with some variables which will be used further in logistic and chi 2 analysis.

Actually, when I will try to show the frequency distribution and chi 2 of those variables, Is using "weight" necessary/more appropriate in all of my variables which I am recoding?

It will be better for me if you answer this like earlier.
