I tried to match the extracted data with the 2015-2016 Malawi DHS (Table 14.3), but failed.

I did match the total number of men (7041) and corresponding prevalence. However, the age breakdowns did not match. Which age variable(s) should I use to match the DHS report?

Also, why does the total number of women in the data (8084) not match the number in Table 14.3 (7736)?
