Following is a response from Senior DHS Stata Specialist, Tom Pullum:

In the IR file, 86% of women (weighted) have "None of the above" for v131. There is not a great deal of ethnic diversity, except in Pacifica (v024=4). As a first approximation, if there are IR cases in the same household as an MR case, you could impute the man's ethnicity to be the same. However, this is definitely not reliable. Perhaps other users will have suggestions.
