Hi, I am using the ALIR50DT data under Albania. Some of the variables are listed as being coded country specific in the recode manual and map. I was wondering how to find out what the values are for Albania specifically for these variables? I looked at the "Albania Demographic and Health Survey 2008-09" publication and the survey is at the end of the publication, however it does not seem to line up with the actual coding of the variables in the data set.
