---

Dear all members,

I am new to DHS. I am a student on work on Cambodia DHS in domestic violence for my thesis "factors associated with domestic violence in cambodia".

1. Did I have to double weight this data or I have to weigh only the violence weight?

2. I do not understand about (CDHS 2014 report) how the Table 20.8 Marital control exercised by husbands

Percentage of ever-married women age 15-49 whose husbands/partners have ever demonstrated specific types of controlling behaviors, by background characteristics, Cambodia 2014.

How is the number of ever married women determined in this table?

I try to tab it but it does not work.

Bests,

sokha
