
Subject: Replication of out-of-pocket expenditure table

I was trying to replicate the delivery cost table (Table 8.20) of the National report, National Family Health Survey 2017 but using R. And due to the complex survey design, I am facing several issues to get the desired result in R. It would be very helpful if I can have the Stata codes used to reproduce the aforementioned table in Stata.

Thanks,
Mrinal
