Dear Trevor and DHS team,

Thanks for your help, it has worked well.

However, I am using 2015-2016 Malawi DHS data to estimate the proportion of mothers who received postnatal check-up, but my results are not matching with the results in the report. I do not see any variable with the options regarding receiving postnatal care within 2 days. Using SPSS, which variables can I use to estimate:

1. Whether a mother received postnatal checkup or not?
2. Whether a mother had postnatal check within 2 days after delivery

Or how can I recode the variables to achieve my objective.

Please help.

Thanks
