Dear User, A response from Dr. Tom Pullum:
Quote:
The DHS analysis group uses Stata, sometimes R. We do not use SPSS and we cannot help you with the syntax of multilevel commands in SPSS. Regarding weights, we do not have separate weights for the different levels, only the net weight, which is proportional to hv005 or v005. We intend to develop recommendations for how to partition this into cluster-level and household-level weights but are not yet prepared to suggest anything specific.
