A response from senior technical specialist, Dr. Tom Pullum,
Quote:
I strongly recommend that you use the CR file, which matches men and women partners on the same record. The age difference (man minus woman) is mv012-v012. You would weight with mv005, the man's weight. Non response is generally higher for men than for women, so we recommend using the man's weight. There has been some recent work by Stan Becker proposing an alternative weight.
