Following is a response from DHS Technical Specialist, Shireen Assaf and DHS Associate, Christina Juan:

The following code below will match Table 13.3. You were using the wrong variable for this table.

use PKIR61FL.DTA, clear

```
recode v739 (1=1 "mainly wife") (2=2 "jointly") (4=3 "mainly husband") (5/6=4 other) (9=5
missing), gen(decidecash_rep)
```

\* this will match the total

```
ta decidecash_rep [iw=v005/1000000]
```

```
gen women_hus_earn =v746
```

```
replace women_hus_earn=9 if v746==8
```

```
replace women_hus_earn=4 if v743f==7
```

```
replace women_hus_earn=5 if v731>0 & (v741==0 | v741>2)
```

```
replace women_hus_earn=6 if v731==0
```

```
label define women_hus_earn 1"more than husband" 2"less than husband" 3"same as husband"
4"husband has no cash/work" ///
```

```
5"woman work but no cash" 6
```

```
"woman did not work"
```

```
label values women_hus_earn women_hus_earn
```

\* this will match the crosstab for the women's earnings, ignore the category 9 which is not shown in the table

```
ta women_hus_earn decidecash_rep [iw=v005/1000000], row
```

```
recode v743f (1=1 "mainly wife") (2=2 "jointly") (4=3 "mainly husband") (5 6 8=4 other) (9=5
missing) (7=.), gen(decidecash_hus)
```

```
ta decidecash_hus [iw=v005/1000000]
```

\* this will match the crosstab for the husband's earnings, ignore the category 9 which is not shown in the table

```
ta women_hus_earn decidecash_hus [iw=v005/1000000], row
```
