
Subject: Is there a Recode Manual for KR, PR and HW datasets?

Hi all,

I want to merge data from HR, IR, MR, KR, PR and HW datasets.

The official Recode Manual (Version VI) includes information about the first three datasets (HR, IR and MR) but no information for the other recodes. I didn't find any recode manual that included info about the other datasets.

Is there a document that includes all variables and their descriptions and I just missed it? Where can I find it?

Thanks a lot!

Best,
Timo
